Introduction

Report Summary

Founded in 1912 to advance the quality of architectural education, the Association of Collegiate Schools of Architecture (ACSA) represents all accredited programs and their faculty across the United States and Canada, as well as nonaccredited and international affiliate members around the world. The ACSA Institutional Data Report combined data collected by ACSA with data reported to the National Architectural Accrediting Board (NAAB), the Integrated Postsecondary Educational Data System (IPEDS), the Carnegie Classification of Institutions of Higher Education and other architecture organizations to investigate current and historical metrics of institutional effectiveness and begin to allow for peer institution comparisons. The report details more than 530 architecture degree programs at 148 institutions including trends in student enrollment, an index of schools by program size, statistics on college entrance examinations, and regional reporting on student faculty ratios and on-time graduation rates.

Undergraduate Admission Statistics

SAT

Using the 25th percentile and the 75th percentile scores reported, the SAT I: Reasoning Test showed an average three part score of 1730 for incoming architecture students. Scores on the Verbal and Writing sections were highly correlated and scores on the Quantitative section were consistently higher than the other two sections. Estimated averages for 2017 are as follows:

Verbal: 590-600
Quantitative: 570-580
Writing: 560-570
Undergraduate Admission Statistics

ACT

Scores on the ACT have showed continued consistency from 2009 - 2017. On the whole, scores proved to be fairly consistent across accredited programs.
Graduate Admissions Statistics

GRE

The Graduate Record Examinations (GRE) proved to be fairly consistent across accredited programs. The average scores for incoming students has been 154 and 152 on the GRE Quantitative and Verbal sections respectively. GRE Analytical scores have averaged 3.3 since 2014.

Peer Institution Regions

ACSA Regions for Research

Using regions created by the U.S. Census Bureau and the Carnegie Classification of Institutions of Higher Education, the following regions were created specifically for the purpose of identifying peer institutions within architectural education. The map below shows the 11 comparative regions. This reformatted research metric allows ACSA to track regional shifts in the enrollments, budgets, and faculty dynamics of Full and Candidate members. On the following pages, graduation rate is defined as the percentage of students who graduate within the published time to completion.

Note: Limited data are available for the Outlying Areas and Canada regions.
Region: New England

13 Schools

Enrollment trends for the Northeast show one of the smallest number of students pursuing B.Arch degrees across all regions. Total enrollment gaps for preprofessional degrees and M.Arch degrees are narrowing which could indicate alignment between the two degree programs. In the past 9 years, enrollment in B.Arch and M.Arch programs remained steady. Based on the 2017 data reported to NAAB, this region boasts the lowest student:faculty ratio and one of the highest average on-time graduation rates for preprofessional programs despite a slow decline in enrollment since 2012.

VFAAD

Preprofessional

M. Arch

B. Arch
Region: Middle Atlantic

22 schools

Trends in enrollment for the Middle Atlantic region show the largest number of students pursuing B.Arch degrees across the country. Enrollment in this degree program has remained steady over the past 9 years. This region boasts the highest average on-time graduation rates for preprofessional programs and M.Arch programs and the second lowest student:faculty ratios.

M. Arch  
PreProfessional

Enrollment trends in the South Atlantic region show the largest enrollment of students pursuing a M.Arch degree across all regions. This region is second in size only to the Middle Atlantic region. Preprofessional degree programs, as reported to the NAAB, hold the highest average on-time graduation rate for programs within the region and are among the highest in the country.
Region: East South Central

6 Schools

Trends in enrollment in the East South Central show continued stability. Based on the 2017 data reported to NAAB, this region boasts the second lowest student:faculty ratio, the second highest average on-time graduation rates for preprofessional programs and one of the lowest graduation rates for B.Arch degree programs. This region is the smallest region in the mainland United States.

Student:Faculty Ratio - 14:1

Trends in enrollment in the East South Central show continued stability. Based on the 2017 data reported to NAAB, this region boasts the second lowest student:faculty ratio, the second highest average on-time graduation rates for preprofessional programs and one of the lowest graduation rates for B.Arch degree programs. This region is the smallest region in the mainland United States.
Region: West South Central

15 Schools

Enrollment trends for the West South Central region show the second largest total enrollment of students pursuing preprofessional degrees across all regions and the most closely aligned average on-time graduation rates across degree programs as reported to NAAB in 2017. Notably, this region shows an increase in enrollment numbers across degree types from 2016 to 2017.

Average Graduation Rates

</table>

Student:Faculty Ratio - 18:1
Region: East North Central

19 Schools

Trends in enrollment for the East North Central region show the largest number of preprofessional students despite a substantial decline from the 2009 high. The region reported the highest average on-time graduation rate for B.Arch programs (tied with the Mountain region), as reported to the NAAB. This region also reported the second lowest student:faculty ratio tied with the East South Central region at 14:1.

Average Graduation Rates

Preprofessional: B. Arch: M.Arch

Student:Faculty Ratio - 19:1
Region: Pacific

16 schools

Enrollment trends for the Pacific region show the second largest number of students pursuing B.Arch degrees which has remained steady. Much like trends evident in the New England region, enrollment gaps between preprofessional and M.Arch programs appear to be closing, suggesting a relationship between the enrollment numbers.

Average Graduation Rates

Additional Regions

**Canada**

Historical enrollment data for Canadian member schools is currently unavailable. However, enrollment reported to StudyArchitecture.com showed stable enrollment numbers from 2017-2018. This region is comprised of 12 schools and more than 35 architecture related degree programs.

**Outlying Areas**

Along with the East South Central, trends for the Outlying Areas show the smallest number of students pursuing preprofessional degrees and M.Arch degrees across regions. This region is comprised of 6 schools, 4 in Puerto Rico and 2 in the United Arab Emirates.

Faculty by Funding Type

Full-time/Part-time Trends

Comparing public and private institutions shows a larger percentage of private institution faculty working as part-time faculty. However, numbers indicate that this has long been the practice at private schools and show that part-time faculty comprise an increasingly higher percent of the faculty body across the US.
Faculty by Carnegie Type

Full-time/Part-time Trends by Carnegie Class

The percentages reported here indicate that schools with higher research rankings have consistently hired more full-time faculty. However, for most of the Carnegie classes, trends still indicate a rise in the percent of part-time faculty over the past five years.
Faculty Credentials by Percentage

Degree types for Full-time Faculty

Faculty credentials are often discussed as a way of gauging research capability. While approximately half of the faculty population holds a M.Arch, just under one third of the population have completed post-professional and Ph.D programs. In recent years, numbers indicate a small growth in M.Arch credentials and a corresponding decline in post-professional credentials and architectural registration. Schools also report a rapid decline in the percent of full-time faculty who are registered in U.S. jurisdictions. However, it is worth noting that the statistics below do not include part-time and adjunct faculty who are often licensed practitioners.
Faculty Credentials: Ph.D. and Licensure

Licensure and Research degrees

This graphic illustrates the volatility of the number of faculty who are also registered architects in the United States. Conversely, the number of the faculty holding doctorates in architecture appears stable. These metrics mimic the academy’s struggle to find balance between professional experience and research expertise.
Faculty Credentials by Gender

Degree Types for Full-time Faculty by Gender

As reported by individual institutions, faculty credentials by gender shows the increased likelihood that female faculty hold Ph.D.s in architecture or other disciplines. It also shows that male faculty are more likely than females to hold B.Arch degrees and slightly more likely to have obtained M.Archs and post-professional degrees.
